

Relations To Bioinformatics

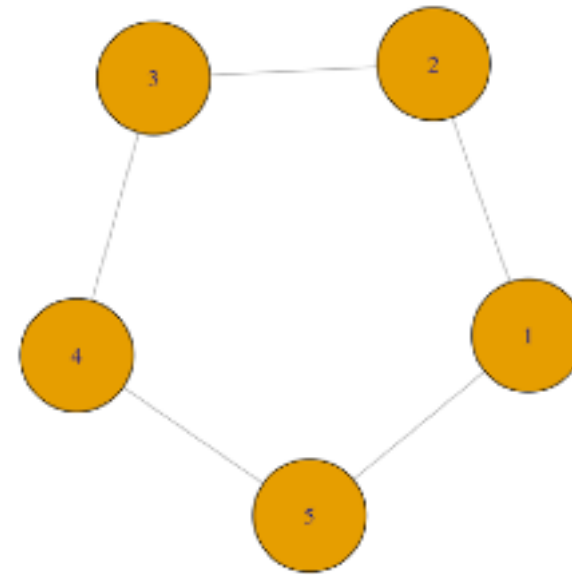

- ▶ Genes form networks to regulate different functions in a human body.

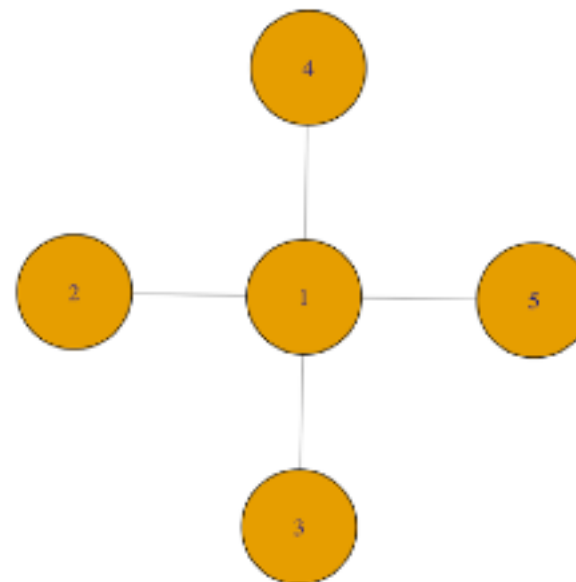

- ▶ Cancer = Uncontrollable cancer cell growth
- ▶ Often this growth is due to a disturbance in a key regulatory gene - the hub of the network.

Network Centralisation

- ▶ **Node centralisation** defines the most important node in a network.
- ▶ **Network centralisation** is the weighted average of node centralisations.

Centralisation = 0

Centralisation = 0.67
